Vertical Cantilever HeadCell[®] Grit Pumps

Existing Installation

Fulton WWTP in New York state includes the installation of an EGGER Vertical Cantilever pump mounted on top of a Eutek HeadCell advanced grit removal system, utilizing a suction tube to pump grit from the bottom of the HeadCell. This arrangement eliminates the need for a dry pit pump in a separate building, providing a great opportunity for cost savings on initial installation materials.

Trouble Free Maintenance

The EGGER Vertical Cantilever Pump has no mechanical seals or bearings exposed to process fluid, allowing it to be run dry and simplifying & reducing maintenance, making this EGGER Pump ideal for your grit pumping and other waste water sludge & scum applications.

Optimal Operation Costs & Durability

EGGER Pumps include a unique and proprietary design that allow them to operate more efficiently and to be more durable than any other grit pump on the market, making this Cantilever HeadCell Grit Pump arrangement ideal for cost savings and providing a long lasting pump system.
